Breathitt County High School - Data Questions

1. What does the data tell us?
Data continues to support the need for intervention in reading and math.
2. What does the data not tell us?
Data does not take into account students who didn't take the Winter Assessment.
3. What is there cause to celebrate?
11th grade reading scores tell us that students in that grade are more prepared than those in 9th and 10th grades.
4. What is the need for improvement?
Definite need for improvement in all aspects of reading and mathematics.
5. What are our next steps?
We have restructured our schedule for the remainder of the year to an 8-period day. This allows teachers to use one period for targeted interventions. In addition, we are considering the feasibility of a 6-period trimester for next year with all students who need interventions in an intervention class. Reading Plus and Aleks Math software programs are being discussed as the intervention tool.
